CASE STUDY · FREELANCE SUPPORT

Webinar Marketing Automation System

From registration to replay: end-to-end setup of a live webinar funnel

ROLE	TYPE	LANGUAGES	PERIOD
CRM & Marketing Ops	Freelance support	French / English	Sep 2026

OVERVIEW

A live webinar campaign needed a complete system that took a person from sign-up to attendance and follow-up without manual work. I set up the webinar platform, the email automation, the web pages and the CRM logic that connect them.

TOOLS USED

WebinarJam · Brevo · WordPress · CRM workflows · Email automation

WHAT I BUILT

01 Webinar platform
WebinarJam configured for registration, the live session and attendance capture.

02 Email automation
Brevo flows for confirmation, pre-session reminders and post-session replay follow-up.

03 Registration page
Bilingual landing page built in WordPress and added as a separate page on the existing site.

04 Replay page
Protected replay page published for access after the live session.

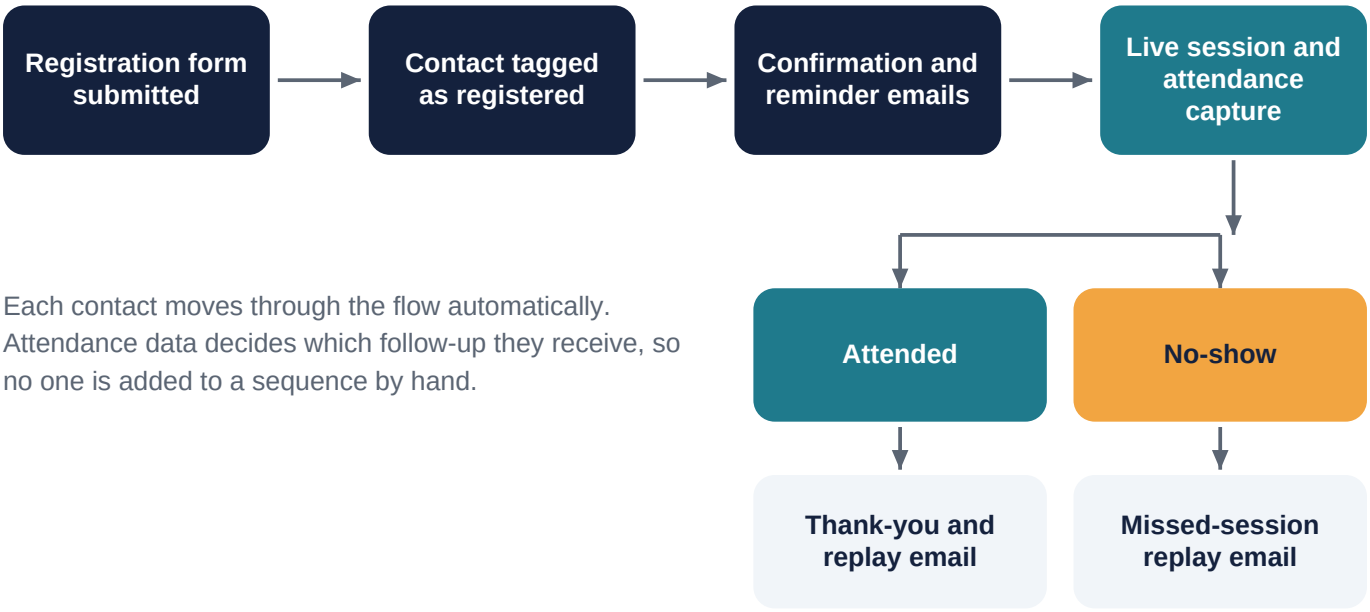
05 CRM workflow
Form submit, tag as registered, reminders, attended / no-show split, replay sequence.

Client, event and brand details withheld.

CASE STUDY · WEBINAR AUTOMATION SYSTEM

How the automation flows

REGISTRATION TO REPLAY



Each contact moves through the flow automatically. Attendance data decides which follow-up they receive, so no one is added to a sequence by hand.

MY CONTRIBUTION

- Configured the webinar platform for registration, live delivery and attendance capture.
- Built the Brevo automation: confirmation, reminders and replay follow-up.
- Designed the CRM logic, including the attended / no-show split.
- Created the registration page and the protected replay page in WordPress.

OUTCOME

A single connected flow covering sign-up, reminders, attendance tracking and replay follow-up, with the right message reaching each contact at the right time.

Strategy, copy and creative assets were produced by the wider team and are not shown.
